Log 3PCC

http://135.185.70.246/~clarisse/inf_2.3_sip_only/tmp/log9999_02...

Log 9999-0211-3pcc

9

```
Sun Feb 11 22:19:02 CST 2001
first version that completes a 3PCC call between two
local phones:
tmp/ephone_1 with options: -log -b 3575/3585 -v -v -d -d -t
tmp/ephone_2 with options: -log -b 3070/3080 -v -v -d -d -t
controlled by cc phone stack:
tmp/ephone_cc started as:
$ sip -v -v -d -d -u cc -p ibetmobile1:'5060 -au 9999@kenmare.net@':9999
and using the following call setup script:
```

```
$ echo a 8070 0 >/dev/sip
# echo A >/dev/sip on the 8070 phone
$ echo a 8075 1 >/dev/sip # 1 because there is only one phone call active
# echo A >/dev/sip on the 8075 phone
$ echo a 8070 1 >/dev/sip # reuse same single active call
```

```
The resulting logs are:
# call control scripted log
log9999_0211_3pcc
# ephone_1 log
log8070_0211_0887
# ephone_2 log
log8075_0211_0691
```

Notes: if multiple calls are going to be controlled the ephone_cc must be started with the -m option. The three step script above must use the session id instead of number "1" call. The call tear down needs some work on cc side, but this could also be an issue with iSIP responses when all the clients share the same IP address. The hear/speak debug message have been fixed.

```
(inferno@ibetmobile1 inferno)$ emu-
using local version /home/inferno/inf2.3-356
